MINIMUM DISPENSING 0.1ml.

AUTOMATIC STIRRING OF TINTERS

### GYROSHAKER

ELEGANT DESIGN

EASY TO USE

STEADY AND RELIABLE

VARIOUS SIZES OF CONTAINERS

## AUTOMATIC PAINT DISPENSER

Highly reliable stainless steel pump and stepper motor dispense tinter most accurately in a least count of 0.100ml. Pumping units don't need calibration and deliver exact formula again and again.

Tinters are stirred at preset time intervals and while the pumps are in operations

Low level of tinter in any canister is indicated.

Container : 1/2Ltr/Kg to 20Ltr/Kg

Container Size : D 280 mm X H 370 mm [max]

**Note :** *Manual Dispensers are also available*

## GYROSHAKER

Bi-directional rotation generated from the rotation of bottom table by PU belt in the machine ensures fast and complete mixing of containerised paints.

Rubberised pad for bottom table, adaptor and small adapter as per customers' container size to hold the container in position.

Positive locking over and above safety lock to prevent container slippage as fail safe arrangement.

To avoid human error, mixing time is preset by timer provided in electrical-circuit.

In-built Interlocks are provided to prevent accident during running.

Available for 20, 10 and 4 liters.

## POINT - OF - SALE SOFTWARE.

### Master Library Software:

Allows the user to feed the shades and their respective formulations. This master programme will always be in the custody of the Paint manufacturer.

### Dealer outlet Software:

This software will be the actual interface at the outlet. The software will allow the selection of the shade by several methods. i.e.

- Selection from Fandeck.
- The customer brings in a sample.

The sample color is scanned by the sensor and searched in the Fandeck. A close match is selected if available.

If a close match is not found then a reasonably close match is selected and corrected online.

If this is not possible then the shade is newly formulated by the software.

This guarantees that each and every shade is matched whether it is in or not in the library.

Provision for standard pack size and custom pack size is also made in the software.
